PRESSURE DE-BOOSTER

The **BDWS Pressure De-Booster** allows reduction in the high pressures transmitted through hose or tubing from the service truck pump pressure manifold to remotely located readout instrumentation by 75%.

High pressures required for fracturing, acidize, cementing and hydrostatic testing are reduced to the ratio of 4 : 1 while passing through fittings, hoses or tubings, to pressure gauges and recorders.

FEATURES

- Manufactured from Alloy Steel.
- Various sizes of QUN available on request.
- 5,000 to 20,000 psi working pressure.
- H2S or Standard service.
- Pressure test to the required Test Pressure.
- Part Number available upon request.
